

PRESIDIO®

Practical thinking for a connected world.

PHYSICAL SECURITY

A Network Approach to Physical Security

Total physical security is invaluable to your business and starts with the protection of human capital, intellectual property and physical assets. As a leader in designing custom IP-based security systems, Presidio has the knowledge and expertise to effectively integrate physical security technologies into your network in a way that fits your needs and budget.

Video Surveillance

Keep an eye on your assets

It is critical that you are able to know what goes on in-and-around your facility in order to protect your valuable assets. We work to evaluate and assess your needs to deliver cost-effective and scalable solutions.

We offer the following video solutions:

- Surveillance of personnel and assets (property/employees/materials)
- Live or archived visual identification of individuals
- Audit and forensic search capabilities
- Remote IP-based viewing capability via VPN or mobility applications
- Interoperability based on industry standards
- Video Analytics

Access Control

Access to facilities simplified

The ability to manage who can access your facilities protects both personnel and property, controlling risks and costs.

We partner with industry leaders to offer electronic systems that provide:

- Scheduled door locking and unlocking
- Authorized user access
- Multiple building monitoring over LAN/WAN
- Status and event reporting
- Perimeter detection
- Identify who, when, and where

Our Physical Security System includes:

- Video Surveillance
- Card Access
- ID Credential Systems
- Door Entry Systems
- Intrusion Detection
- Visitor Management Systems
- Mass Notification Systems

About Physical Security:

An advanced physical security solution can help make the difference between peace of mind and a business crippling incident. We focus on preventing security risks, because no one can afford to be unprepared.

PRESIDIO®

Practical thinking for a connected world.

PHYSICAL SECURITY

Visitor Management Systems

Managing risks to protect resources

Visitor management systems offer central management with quick, efficient enrollment into an organization's system, all to protect your employees and to support a positive visitor experience.

With visitor management systems you will be able to:

- Audit Trail
- Assign Access Privileges
- Assign Employee Hosts
- Schedule Visits with Access Requirements
- Track Visitors
- Generate Detailed Reports to Meet Compliance Requirements

Mass Notification System

Rapid response and notification can make the difference

Emergencies are an unfortunate occurrence, but that doesn't mean you shouldn't be prepared. A situational awareness solution for monitoring, event linkage, reporting, and administration can reduce your overall cost and response time to situations for which no one wants to plan.

ID Credential Systems

Protect your people and properties

We design and install ID credential systems that integrate into your existing employee database and active directory. This ensures the correct privileges are assigned to the right people. With centrally managed employee security information, you can manage the ID lifecycle from enrollment and information management to access revocation.

"Your assets' security is our top priority."
