

END USER COMPUTING (EUC) PRACTICE

SOLUTIONS FOR SUCCESS

- Create stable, holistic environments that provide users with an end-to-end EUC solution
- Work with industry-leading technologies to help our customers achieve their goals for workspace delivery
- Assist with troubleshooting, upgrades, and configuration challenges
- Provide unbiased best practice recommendations based on years of EUC expertise

OUR STRATEGIC VALUE

Presidio brings strong partnerships with industry leading vendors to provide our customers with real value in our engagements. Our approach is to provide the best technology solution to fit your needs and couple that with world-class delivery services. Our team of industry-recognized experts are ready to design and deliver for any customer and use case.

OUR APPROACH

To design a holistic EUC solution requires an understanding of the technologies required, the processes that must be supported, and the drivers for success. We specialize in creating environments that solve not just the question of session delivery, but also integration with best of breed 3rd party vendors to complete the EUC solution stack.

CUSTOMER CASE STUDY

A large financial institution had a need to upgrade and modernize their large virtual desktop deployment. VDI was critical to their success in dozens of branch offices across multiple states, all varying in size. Internal staff was divided about the best approach to move the platform forward.

Presidio performed a full assessment of their existing VDI environment including hosting, storage, networking and delivery. We worked hand in hand with customer leads to architect a next generation platform that gave them 100% uptime even in the face of major version upgrades. Phase 2 of the project had us design a DR as a Service solution hosted in Azure. Total cost savings over a physical DR location was significant.

OUR CONSULTING METHODOLOGY

ASSESS	The assessment process consists of data gathering and interviews that cover operations capabilities, as well as application and infrastructure management strategies. The objective is to identify initial business and technical requirements, dependencies and risks.
DESIGN	Our Design phase builds on the Assessment Document to build the solution that works for you. Our recommendations are based on industry best practice, emerging technology trends, and our years of experience building End User Compute environments from 5 to 55,000 seats.
IMPLEMENT	Presidio EUC Delivery Engineers perform dozens of implementations in the course of a year. Our team is constantly learning, growing, and evolving as the technology itself evolves. Presidio is proud to be recognized for our partnerships with companies like Citrix and VMware for our work in the EUC space.

ABOUT PRESIDIO STRATEGIC CONSULTING SERVICES

Presidio provides high-level consulting services to both design and deliver industry-leading solutions for our customers. We bring years of experience across technology vendors to provide you with the value you expect for your project.

Our team helps you analyze, plan, and deliver a robust EUC solution that meets your goals and provides your users with a complete and stable EUC environment to address your IT requirements – all through a single technology partner.
