Strengthen Your IT Strategy With Intrinsic Security

Use your infrastructure to secure any app, any cloud, any device

GET STARTED
We need better security

Our connected digital world is extremely reliant on effective cybersecurity. As more business processes become digitized, and workplaces expand on remote work and digital customer experiences, securing our apps, data, and devices is paramount.

It’s time to think differently

Despite growing IT investments in security, studies show that the likelihood of getting breached is growing steadily each year.²

This is why Presidio and VMware, in partnership, are approaching security in an entirely new way.

Move to a position of strength

Intrinsic security is not a product or tool. It’s a strategy for leveraging your infrastructure and control points in new ways—in real time, across any app, cloud, or device. Our software-based approach:

- Maximizes security controls across endpoints, workloads, networks, workspaces and clouds.
- Unifies security and IT teams to fuel collaboration and agility.
- Generates context-centric intelligence that enables you to respond faster to new threats.

Bolted-on solutions, siloed teams and threat-centric solutions are not the answer

- 7 million data records compromised each day¹
- 56 records compromised each second³

- 3500+ security vendors that exist today across multiple specializations²
- two thirds organizations that do not have a unified IT and security strategy in place³

- 60% prefer built-in security controls over agent-based solution³
- 70% agree security controls should be built into the hypervisor³
Intrinsic Security
Use threat intelligence and existing infrastructure to protect your apps and data.

For Endpoints & Workloads
Extend protection across key security control points with cloud-native endpoint and workload protection.

For the Workspace
Extend protection to the workspace with VMware Carbon Black Cloud, which enables you to secure users, endpoints, and apps with better visibility to detect, identify, and prevent threats.

VMware Carbon Black Cloud analyzes:

- **540 TB** endpoint data per day
- **1.3 TB** event data per day

VMware gets high marks for endpoint security for the workspace.

By implementing the VMware Service-defined Firewall with NSX, customers saw up to:

- **60%** reduction in the number of traditional firewalls required.

Intrinsic Security
Know what others can’t. Do what others can’t.

Leverage your infrastructure and control points in new ways so you can turn every touchpoint from a potential vulnerability into an asset for gathering insights and taking action.

With intrinsic security, you know what others can’t, and do what others can’t, so you are in a position of strength.

For the Network
Control traffic through segmentation, secure network access, and inspect all traffic—including east-west—for anomalies or vulnerabilities, while simplifying management.

For the Cloud
Detect, manage, and respond to vulnerabilities and threats across cloud providers.

VMware cloud security solutions have detected over:

- **7 million** security and compliance violations across multiple public cloud environments.

VMware gets high marks for endpoint security for the workspace.

- **99.8%** protection rate
- **100%** malware protection rate

Intrinsic Security

- **6/6** in prevention
- **6/6** in detection
Adaptive security for next-gen risk management

Expert support at every step

Presidio applies our deep understanding of business and technology to keep organizations ahead of security challenges and compliance demands. We support industry leaders in security-intensive sectors, from finance to retail to healthcare. We bring an elite team to each engagement, drawing from an unparalleled pool of specialists in strategy, architecture design and implementation, testing, security operations, and beyond.

Full-service, fully committed partner

Presidio operates as an extension of your organization, collaborating with your team at every step. We take the time to thoroughly understand your requirements, resources, and priorities, to deliver the most informed, effective security and risk management support. Take steps today to protect your organization against cyber threats, regulatory violations, and business vulnerability—now and into the future.
About the Presidio and VMware partnership

Presidio and VMware collaborate to accelerate our shared customers’ digital transformation journeys. Presidio combines its strategic consulting and lifecycle services with VMware’s innovative technology platforms, to design, implement and manage agile, secure, multi-cloud solutions optimized for each customer’s unique requirements. Together, Presidio and VMware help our customers realize better business outcomes in a dynamic and competitive marketplace.
