

Microsoft Solutions

From traditional on-premises servers and directory services to SaaS productivity and security platforms to Azure Cloud services, Microsoft technology is at the heart of nearly every workplace today.

PRESIDIO CAN HELP

Presidio helps organizations of all sizes keep their solutions current while delivering business value at every stage of the technology lifecycle.

Organizations benefit from Presidio's holistic view; whether integrating Active Directory after a merger, presenting recommendations on new Windows Server features, or implementing productivity-enhancing applications like Microsoft Teams, OneDrive and SharePoint. Our certified Microsoft engineers have worked with the full range of Microsoft products in an array of situations and industries. We know how to address challenges of integrating both mainstream and emerging technologies in cloud and hybrid environments. This in-depth experience aligned with Presidio's other practice areas gives our customers confidence.

Presidio prioritizes comprehensive assessments before every implementation and ongoing education of decision-makers and end-users. We realize the significant impact of Microsoft solutions on business value.

As a trusted advisor, we make sure tools and applications are fully leveraged and technologies are aligned with organizational needs. We keep up with best practices in security, reliability, and adoption to make sure our customers are always benefitting from proven processes. Through workshops, training, and immersion experiences, we expose customers to new technologies and how these innovations might play out in their day-to-day work.

OUR SOLUTIONS

Modern Workplace / Enterprise Mobility

New features, tools, and innovations appear at an accelerating rate. Presidio uses our hands-on knowledge to advise you on the optimal path for your organization to adopt productivity suites such as Office 365, modern device management with Windows 10 and Intune, enterprise voice and video with Microsoft Teams, and secure access to corporate applications and data using Azure AD and Azure Information Protection.

Cloud

Presidio knows Azure — but our knowledge doesn't stop there. As more organizations adopt cloud technologies, the Presidio team of Microsoft consultants further extends our skillset through our wide-ranging expertise in data centers, DevOps, automation, security, and more. From this we can deliver recommendations and solutions in the public cloud while extending all of the way to hybrid and private cloud datacenter infrastructures.

On-Premises Software

Not all applications work best in the cloud. Presidio helps guide you in implementing On-Premises Microsoft technology such as System Center, SQL, Active Directory, PKI, and more.

Data and Analytics

Even the most robust collections of data are of limited use if they are not driving insights and business decisions. Presidio helps you use tools like Azure IoT, Azure Data Factory, SQL Datawarehouse and Power BI to put this valuable information to work.
