One in 4 key components

- **Prevention**: We go beyond monitoring and alerts, with AI-powered models identifying malware and ransomware binaries before they detonate.
- **Detection and Response**: Our platform, ActiveEDR, provides both attack hunting and response capabilities. It builds critical context for proactive real-time risk assessment.
- **Cost Optimization**: By integrating threat intelligence with ransomware attack data, our solution automates remediation actions, mitigating threats before they become emergencies.
- **Service Continuity**: Our managed detection and response (MDR) service, which automatically detects ransomware, prevents downtime and secures your organization.

**Circumstances**

Forrester Research, June 5, 2019.

**September 2016**

SentinelOne establishes $1 million cyber threat protection warranty giving first-ever industry assurance against growing threats.
