TOP 6 REASONS TO CHOOSE IGEL AND PRESIDIO TO SECURE AND EMPOWER YOUR YOUR ENDPOINTS + CLOUD WORKSPACES

Achieve Comprehensive Endpoint Management and Control for the Secure Enterprise

1. ACCESS EVERYTHING IN YOUR DIGITAL WORKSPACE
IGEL OS is the endpoint operating system designed for access to digital workspaces of any kind – virtual apps, virtual desktops, DaaS, and SaaS.

2. DID WE MENTION SECURITY?
It's secure because all data is stored in the cloud, not on your computer, and IGEL OS is read-only making it tamper-proof, with a chain of trust that ensures endpoint system integrity.

3. IT'S FAMOUSLY EASY
Easy, scalable management and control of IGEL OS-powered endpoints via the IGEL UMS.

4. EXTRAORDINARY USER EXPERIENCE
Excellent user experiences via our lean, high performance IGEL OS along with our IGEL Ready partners - over 120 strong - including all the major unified communications products – Teams, Zoom, Webex, and more.

5. COST SAVING TECHNOLOGY
The lean, efficient IGEL OS enables endpoints to last many years longer before hardware refresh which saves lots of CapEx and reduces landfill e-waste; efficient operation is much more cost-effective than Windows and other OS's to save on energy consumption and OpEx.

6. BUILT FOR THE FUTURE
Modular IGEL OS is architected for today — and tomorrow's digital workspaces — to evolve in lockstep with future cloud advancements to "future-proof" your end user computing (EUC) investment.
