

# Cloud Security Health Check

Customized insights to operationalize best practices for cloud security

As businesses are driving digital transformation that requires moving their applications, workloads and critical data to the cloud, it becomes even more important to rethink how those resources are protected and how those protections are managed.

- Gain full threat visibility for your cloud environment with a consolidated agent and agentless technology platform
- Understand misconfigurations and vulnerability risks and why they matter
- Detect and stop breaches with cloud threat detection and response (CDR) capabilities from code to cloud

**75%**

increase in cloud intrusions

(CrowdStrike 2024 Global Threat Report)

**\$4.75M**

was the average cost of a breach in 2023

(IBM Cost of a Data Breach Report 2023)

**54%**

of major code changes go through security reviews

(CrowdStrike 2024 State of Application Security Report)

## CrowdStrike Cloud Security Health Check

CrowdStrike is offering a free, no-obligation Cloud Security Health Check for your cloud infrastructure and cloud application environment that deploys in minutes with zero impact to your business.

**1**

SEE EVERYTHING IN YOUR ENTIRE CLOUD ESTATE — DEPLOYS IN MINUTES

Gain visibility into all of your organization's cloud resources and insights into your overall security posture and risk

**2**

IDENTIFY RISKY MISCONFIGURATIONS AND HOW TO RESOLVE THEM

Detect misconfigurations, vulnerabilities and threats, and receive guided remediation for cloud infrastructure and cloud apps

**3**

CONSULT WITH AN EXPERT

Get a 1-on-1 review of your cloud security posture with a cloud security expert
