THE AI ERA IS HERE

To stay ahead and competitive in today's landscape, organizations need to be able to efficiently leverage AI and generative AI technologies, like GPT models, to increase automation, speed operations, and free teams to focus on innovation.

However, organizations require any GPT solutions that they use to be secure, confidential, and compliant – protecting sensitive data and meeting regulatory standards are critical. Private, on-premises GPT deployments are essential to guard against data breaches and align with corporate governance policies. This approach allows organizations to leverage AI capabilities while maintaining control and security over their data.

AN ACCELERATED APPROACH TO AI SUCCESS

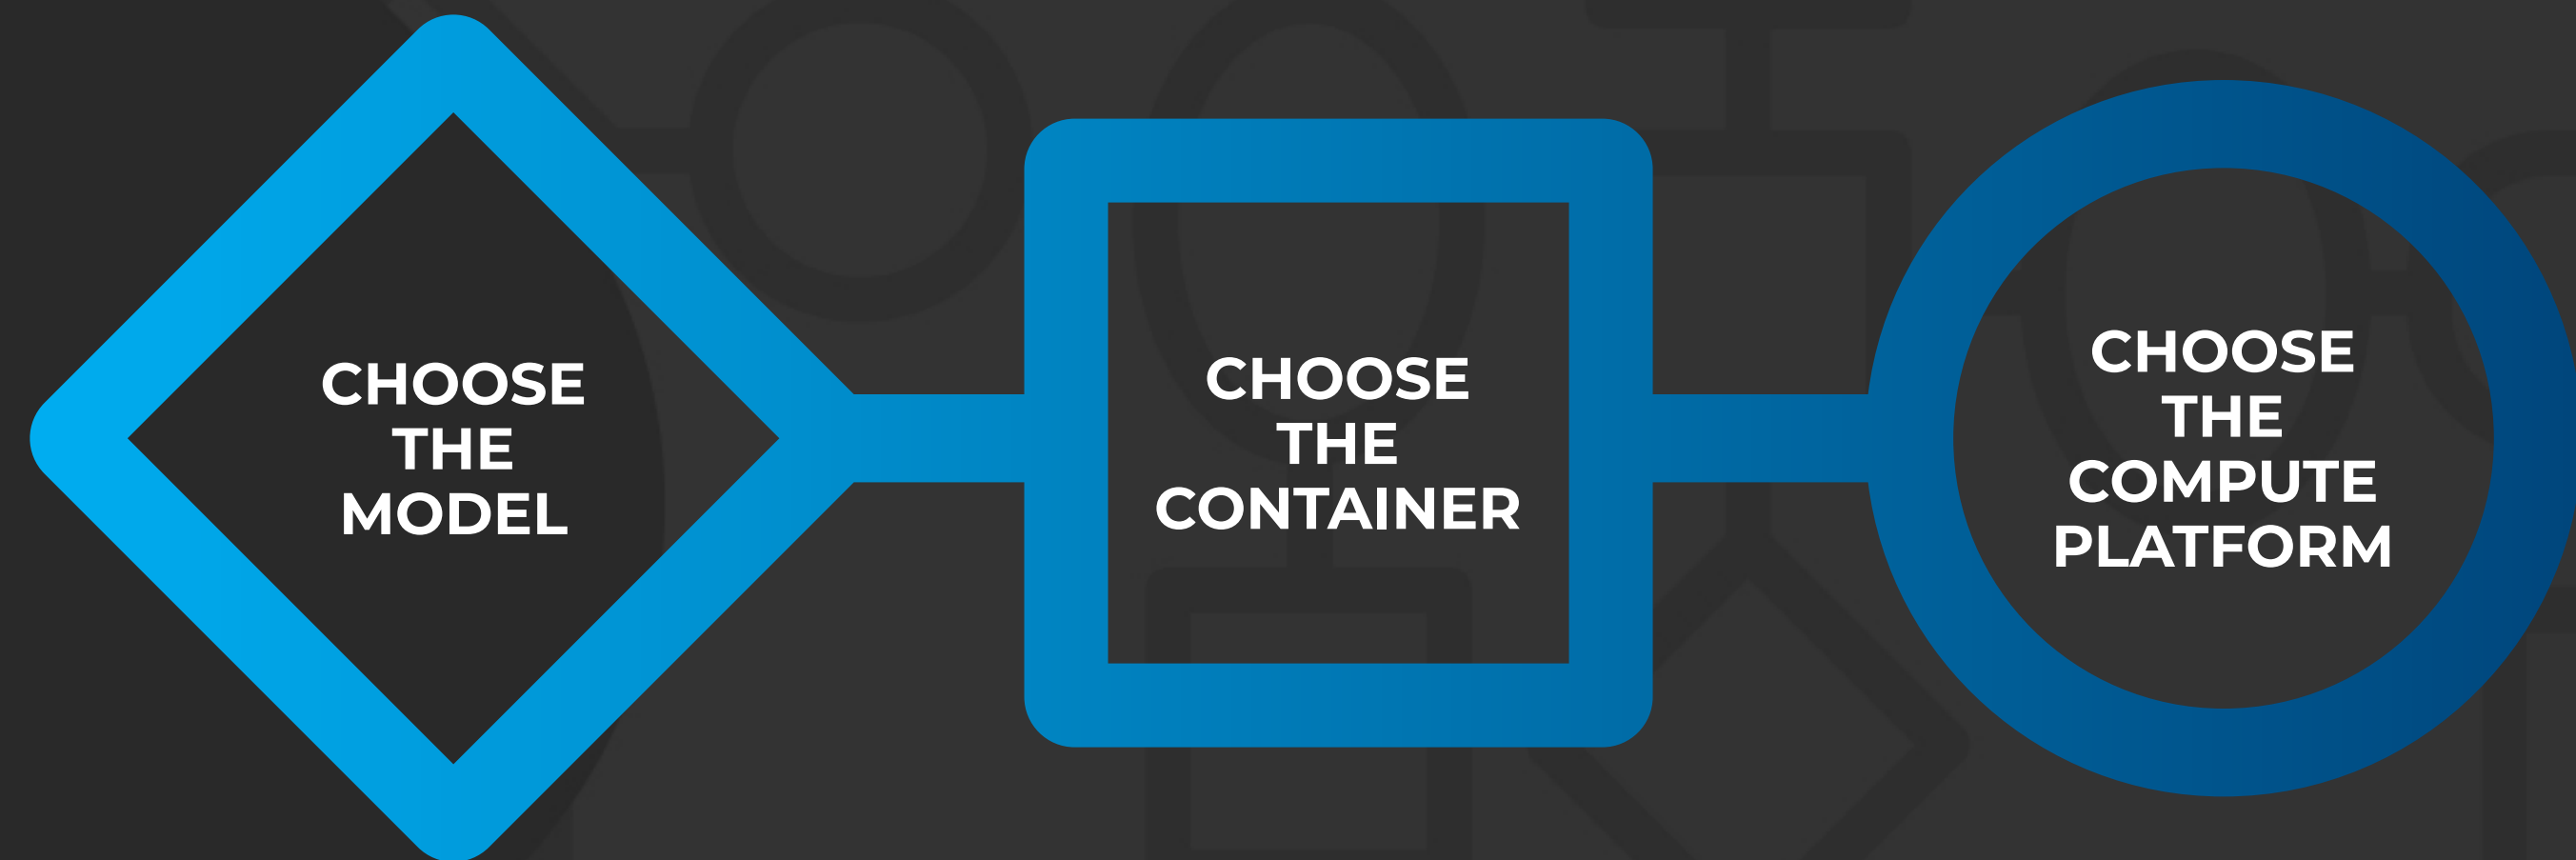

Presidio Private GPT, developed in collaboration with Dell Technologies and NVIDIA, aims to provide organizations with a secure, on-premises AI platform that ensures data privacy and compliance. By deploying AI capabilities within their own infrastructure, businesses can maintain control over their proprietary data while benefiting from advanced AI functionalities.

This solution leverages Dell's AI Factory with NVIDIA, which integrates Dell's compute, storage, and software capabilities with NVIDIA's advanced AI infrastructure and software suite to deliver:

- Chat results based on your data, ensuring relevance and accuracy with document management to keep the index current.
- A modern UI for chat, quality assurance, content summaries, and enhanced user experience.
- Advanced guardrails to control model behaviors, support security, compliance, and consistency.
- Ensures your data stays within your environment, preventing exfiltration and maintaining complete control.

A SECURE, SCALABLE, AND CUSTOMIZABLE AI-READY PLATFORM

Presidio Private GPT is a customizable solution that frees organizations to tailor the infrastructure to directly match their generative AI ambitions and scale as needs grow and the business matures – all deployed in 2 weeks.

ELEVATE CAPABILITIES WITH A PRIVATE GPT/CHATBOT

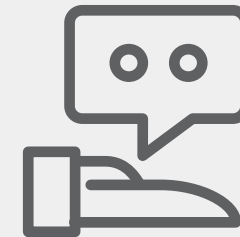

Modern enterprises require 'Chat-GPT' solutions to improve the handling and processing of data and for the generating and analyzing of insights. However, these solutions need to be individualized to ensure the security, confidentiality, and compliance needed to protect sensitive information and meet regulatory standards.

PRESIDIO'S PRIVATE-GPT POWERED BY NVIDIA

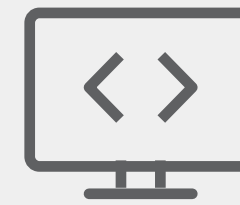

GROUNDING IN YOUR DATA

Chat/QA results are based on your data, ensuring relevance and accuracy. Advanced document management keeps the index current, enabling precise and up-to-date responses.

COMPREHENSIVE CHAT CAPABILITIES

Provides chat, QA, and concept summarization with conversation history for continuous context across interactions to enhance user experience.

MODULAR AND SCALABLE DESIGN

Scale for proof of concept, pilot, or production in line with your AI needs. It supports multi-models, including Private GPT and other use cases, to build flexibility and adaptability.

DATA PRIVACY AND CONTROL

Ensure your data stays within your environment, preventing exfiltration and maintaining complete control to keep sensitive information private and protected.

ROBUST GUARDRAILS

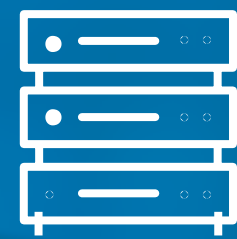

Enforce brand guidelines and correct behaviors to develop consistent and compliant outputs, with guardrails to help maintain integrity of interactions and adherence to standards.

GET MODERN WITH PRESIDIO AND DELL TECHNOLOGIES

By collaborating across a full suite of cutting-edge technologies to deliver modern, data center solutions, Presidio and Dell Technologies help customers modernize their data center in a faster and more cost-effective manner.

OUR ALLIANCE GIVES YOU A FULL PORTFOLIO...

HYPERCONVERGED

...TO DELIVER A HOST OF BENEFITS

- **Evolve predictability:** Upgrade with certainty and minimize business disruption with a curated experience.
- **Cloud migration:** Virtualize and automate the delivery of IT services to boost business agility.
- **Foster operational freedom:** Automated full-stack lifecycle management simplifies operations and reduces risk.
- **Software-defined data center:** Complete customization to reference architectures, we can design the best fit solution for your company.

WHY PRESIDIO?

From cutting-edge AI to foundational IT, Presidio is your guide and trusted ally on your digital journey. No matter the challenges your customers face, our experts reduce risk and get things done.

We pride ourselves on being with our customers for a lifetime, understanding where they've been and where they're going to establish the foundations for long-term, mutual success. We see the big picture, take on any challenge, and help organizations adapt.

Our approach is fearless, fast, flexible, and compassionate. We get involved at all levels to earn your trust and deliver innovative, high-quality results at the speed your customers need to succeed. Thrive in the AI era with the dedicated power of Presidio behind you.

THE DELL AI FACTORY WITH NVIDIA

Reimagine the speed of business and catapult your business forward with cutting-edge AI innovation and scalable AI workflow automation. The Dell AI Factory with NVIDIA forms a fundamental foundation for Presidio's Private GPT solution.

SIMPLIFIED

Accelerate goals from possible to proven faster with comprehensive turnkey strategies and automated workflows. Help customers embrace generative AI at an enterprise-wide scale.

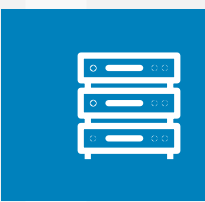

TAILORED

Restore business agility and transform goals into use cases with quality results that advance your customers' business. Deliver all the tools needed to deploy and manage an AI infrastructure across core, edge, and cloud.

TRUSTED

Protect customer data and deliver high-quality outcomes with innovative GenAI models that keep them in control. Confidently build AI strategies on an intrinsically secure platform that supports broad organizational requirements.
