

FOUR STEPS TO ACCELERATING AI SUCCESS

Presidio and Dell take a structured approach to enable clients to accelerate from AI experimentation to enterprise-wide adoption.

STEP 1

Align on Vision and Priorities

The Presidio Rapid Alignment Workshop establishes a common understanding of agentic AI and provides an opportunity to **define your strategic advantages, prioritize use cases, identify data sources, while clarifying risk tolerance and project timelines.**

STEP 2

Prove Value, Fast

Presidio's Prioritized Use Case Accelerator. Presidio develops and tests a pilot hosted on your pre-configured large language model and AWS cloud account, delivering a functional non-production prototype in just four to six weeks.

STEP 3

Expand and Evolve

Presidio's Agentic Use Case Expansion adds features, identifies prioritized production use cases, and explores future use cases, all while keeping costs predictable and within a fixed monthly budget.

STEP 4

Scale with Confidence

Ensure AI initiatives are secure, compliant, and scalable with Presidio's Open Agentic AI Alignment program. This guided journey will **establish a governance board, categorize use cases as either off-the-shelf or custom, define integration strategies, and create acceptable use policies.**

From rapid alignment to long-term value, Presidio and Dell provide the infrastructure, services, and strategic framework to make significant and measurable business impact with AI.
