

AWS Network Design Workshop

Presidio's AWS Network Design Workshop helps organizations evaluate and modernize cloud network architectures to achieve resiliency, security, and operational simplicity — empowering teams to build environments that are simple, safe, and reliable.

Through guided discovery, design discussions, and collaborative sessions, Presidio will help document **key decisions, high-level architectures, and next-step recommendations** aligned to customer business outcomes.

Who Should Participate

Presidio's Cloud Networking team facilitates the workshop, where active customer engagement is expected.

Recommended Attendees:

- Network & Infrastructure SMEs
- Cloud Architects and Operations Owners
- Security and Compliance Stakeholders
- Application Stakeholders

Workshop Topics

The following topics may be covered during the workshop sessions:

- **Cloud Adoption & Operating Models** – Ownership, IaC methodologies, and collaboration for effective cloud adoption.
- **Network Foundations** – Resilient, scalable account, VPC, and multi-region architectures.
- **Connectivity & Transit** – VPN, Direct Connect, SD-WAN, CloudWAN, and Transit Gateway
- **Security & Segmentation** – Layered security, and policy controls across environments.
- **Load Balancing & Scale** – Resilient application delivery with AWS load balancing services.
- **Visibility & Monitoring** – Operations with flow logs, traffic mirroring, and analysis tools.
- **Design & Architecture** – Key design decisions and Day-2 operational priorities.

Key Workshop Outputs

Gain immediate value and insight through the following key outputs of the workshop:

- **Documented design decisions** across connectivity, security, and resiliency
- **High-level architecture diagrams** for AWS networking and integrations
- **Recommendations** for next-phase adoption of cloud networking patterns

Benefits of Workshop

Presidio's AWS Network Design Workshop will provide customers with the following benefits:

- An understanding of current AWS network design and its alignment to enterprise needs
- Clear guidance on resiliency, security, and operational considerations for Day-2 support
- Insight into connectivity options for hybrid and multi-cloud adoption
- Enhanced cross-domain collaboration between network, cloud, security, and application teams to drive operational excellence and accelerate cloud adoption
