

Cyber Security

Cloudflare Services Suite

THE CHALLENGE

Organizations adopting Cloudflare often struggle with:

- ◆ Misconfigured or legacy DNS environments
- ◆ Performance bottlenecks in web delivery
- ◆ Untuned WAF policies that create fragility and operational friction
- ◆ Underutilized Cloudflare capabilities due to lack of expertise or time

Cloudflare is powerful — but only when deployed with precision. Most teams cannot confidently configure DNS, CDN, or WAF securely on their own.

THE SOLUTION

Presidio offers three turnkey Cloudflare onboarding engagements designed for fast, secure, and correct adoption:

Cloudflare DNS:

- ◆ Secure zone onboarding
- ◆ Authoritative DNS migration

- ◆ DNSSEC readiness
- ◆ Guided cutover for a single domain

Ideal for teams with legacy DNS, manual processes, or upcoming cloud/app migrations.

Cloudflare CDN:

- ◆ Rapid onboarding of primary web property
- ◆ Caching, performance optimization, edge routing
- ◆ Baseline security features

Designed for immediate performance gains with minimal disruption.

Cloudflare WAF

- ◆ Foundational protection for 1–5 applications
- ◆ Core rulesets, policy tuning, traffic validation
- ◆ Environment hardening

Perfect for fast risk reduction, compliance needs, and simplified operations.

Cloudflare Services Suite

THE APPROACH

Modern IT teams need fast, low-risk, high-impact deployments — not multi-month projects. Presidio delivers:

- ◆ Prescriptive, expert-led implementations aligned to Cloudflare best practices
- ◆ A structured model: assess → deploy → validate → operational handoff
- ◆ Tight scope, clear outcomes, short timelines
- ◆ Minimal customer effort with maximum value

DIFFERENTIATORS

- ◆ Best-practice implementations aligned to Cloudflare architecture
- ◆ Fast, low-risk deployments designed for immediate value
- ◆ Cross-vendor cybersecurity expertise (Palo Alto, Zscaler, CrowdStrike, Cisco, AWS, Azure)
- ◆ Operationally lightweight engagements
- ◆ Built for scale: Zero Trust, Access, Bot Management, API Shield

KEY BUSINESS OUTCOMES

- ◆ Strong security baseline for public-facing domains and applications
- ◆ Improved performance and reliability via Cloudflare's global edge

- ◆ Reduced operational burden with modernized, standardized configurations
- ◆ Predictable timelines, cost, and deliverables
- ◆ Foundation for long-term Zero Trust and application security expansion

WHY PRESIDIO

Presidio helps organizations navigate the fast-changing tech landscape with fearless, fast, flexible, and compassionate delivery. We bridge foundational IT with modern cloud and AI services, building long-term relationships through trust and high-quality results delivered at business speed

INSTANT CLOUDFLARE VALUE, DELIVERED

Cloudflare provides unmatched global performance and security. Presidio ensures you realize that value on day one — whether through authoritative DNS migration, CDN acceleration, or foundational WAF protection..
