# Public Safety Accelerator

*See everything. Find anything.  
Close cases faster.*

## THE CHALLENGE

Public safety agencies are drowning in fragmented systems — disconnected camera networks, siloed evidence repositories, and manual processes that turn hours of investigative work into days, all while compliance requirements grow stricter and the pressure to close cases faster never lets up.

## THE IMPACT

Agencies that rely on fragmented, manual evidence workflows face compounding consequences across every part of their operation:

- ◆ **Investigations Slow Down**  
When footage is trapped across disconnected systems, building a case takes days instead of hours, and critical evidence gets missed.
- ◆ **Compliance Gaps Accumulate**  
Manual chain-of-custody processes create audit risk that grows with every incident outside a governed workflow.
- ◆ **Officers Do Paperwork Instead of Casework**  
Administrative burden from manual reporting pulls investigators away from active work and compounds staffing pressure.
- ◆ **Public Trust Erodes**  
Slow evidence retrieval and inconsistent documentation undermine the transparency communities expect.
- ◆ **Every New Capability Requires A New Build**  
Without a unified platform, each operational expansion means another custom project, another budget request, and another two-year timeline.

## THE SOLUTION

Presidio's Public Safety Accelerator unifies body cam, dashcam, and fixed feed footage into a single video vault — without replacing current infrastructure. Agentic AI lets investigators query across all sources in plain language, correlate footage, and reconstruct incident timelines instantly, with CJIS-aligned access controls and tamper-evident audit trails built in from day one.

Agencies go from fragmented, reactive operations to a connected intelligence platform in a fraction of the time traditional builds require.

## KEY BENEFITS

- ◆ **Faster Time-to-Value**  
Deploy AI-powered video intelligence and evidence management significantly faster than custom-built approaches, without ripping out existing systems.
- ◆ **Video Evidence Retrieval In Seconds**  
Investigators query body cam, dashcam, and fixed feed footage in plain language. The agentic AI surfaces relevant video, correlates across camera sources, and reconstructs incident timelines in under three seconds — eliminating manual scrubbing entirely.
- ◆ **Compliance Built In**  
Chain-of-custody logging, MFA, and tamper-evident audit trails are foundational to the architecture — meeting CJIS requirements from the first deployment.
- ◆ **AI-Generated Incident Narratives**  
Draft incident reports are generated automatically from evidence metadata, reducing administrative load and freeing investigators for active casework.
- ◆ **Real-time Situational Awareness**  
Anomaly detection and automated alert routing put the right information in front of the right teams the moment an incident occurs.
- ◆ **A Platform That Grows With The Mission**  
Start with video intelligence and evidence management. Expand to live surveillance, cross-agency sharing, and regional interoperability on the same foundation.

## Public Safety Accelerator

### HOW IT WORKS

The Public Safety Accelerator overlays existing camera infrastructure — body cams, dashcams, and fixed feeds — through a centralized integration layer that requires no migration or hardware replacement. All footage is ingested into a unified video vault where agentic AI enables investigators to search across every source in plain language, correlate footage across cameras, and reconstruct incident timelines without manual scrubbing. AI modules handle ingestion, tagging, and organization in real time. Unified identity management enforces access controls and audit logging across every interaction. Investigators retrieve evidence, generate narratives, and route alerts through a single interface — while compliance teams get continuous, automated chain-of-custody documentation rather than point-in-time snapshots assembled before an audit.

### WHAT MAKES US DIFFERENT

- ◆ **Purpose-Built for Law Enforcement**  
Designed specifically for public safety environments, not adapted from commercial surveillance or enterprise security tools.
- ◆ **One Platform, Many Missions**  
Video intelligence, evidence management, live surveillance, and cross-agency coordination — the same architecture supports the full range of operational needs without rebuilding for each one.
- ◆ **Connect What You Have**  
AWS-native overlay adds AI intelligence to existing infrastructure. No capital spend on new camera hardware or evidence system replacement required.
- ◆ **GovCloud-Ready and Available on AWS Marketplace**  
Accessible via government contract vehicles, bypassing lengthy procurement cycles and accelerating time to award.

### WHY PRESIDIO

Presidio is here to guide your business transformation journey by helping you carefully navigate the fast-changing tech landscape. As the bridge between where you've been with foundational IT, and where you're going with modern AI and cloud services, we measure success with you on the terms you define. We strive to build lifetime relationships with each of our customers, and we do so by being fearless, fast, flexible, and compassionate. It's our mission to earn your trust and deliver innovative, high-quality outcomes at speeds once thought not possible, so you can achieve your business goals faster.

#### **Give investigators the speed, automation, and compliance controls modern public safety demands**

Presidio helps state and local agencies unify fragmented camera networks and evidence systems into a single, CJIS-compliant AI intelligence platform. By combining a unified video vault, agentic natural language search, and reusable AgentCore modules, agencies can cut evidence retrieval from hours to seconds — without replacing existing infrastructure. With the Public Safety Accelerator, agencies can close cases faster, meet compliance requirements with confidence, and scale capabilities across the full public safety mission.
