Cyber Vault Validation Service

THE CHALLENGE

Many cyber recovery environments have never been validated under real-world conditions. Backup data may contain corruption or malware, replication can drift from production, and recovery processes are often untested. As a result, recovery readiness is assumed rather than proven, increasing the risk of failed recoveries, extended downtime, and operational and financial impact.

THE SOLUTION

Presidio's Cyber Vault Validation Service (CVVS) is a hands-on professional engagement that validates whether your recovery environment will perform under real-world conditions. The service verifies every critical component, including vault isolation, backup integrity, malware cleanliness, recovery execution, and runbook accuracy. It replaces assumptions with evidence by delivering a score-based Vault Readiness Assessment, detailed findings, and a prioritized remediation roadmap. The result is measurable recovery readiness and a clear path to stronger cyber resilience.

THE APPROACH

Presidio applies a structured, multi-phase methodology to validate cyber recovery across five critical dimensions: vault isolation, backup integrity, malware cleanliness, recovery execution, and runbook accuracy. The engagement includes environment scoping, architecture and control validation, integrity checks, simulated recovery testing (where applicable), and measurement of recovery performance against defined objectives. The outcome is an evidence-based view of recovery readiness and a clear understanding of the gaps that must be addressed.

KEY BENEFITS

- ◆ **Proves recovery readiness:** Validates critical workloads can be restored and flags gaps before they cause failed recoveries.
- ◆ **Validates RTO/RPO:** Confirms recovery performance through testing, reducing downtime and costs.
- ◆ **Delivers visibility:** Provides a score-based readiness view and prioritized remediation roadmap.
- ◆ **Strengthens ransomware resilience:** Verifies vault security against backup-targeted attacks.
- ◆ **Supports compliance:** Provides audit and cyber insurance evidence.

WHY PRESIDIO

Clients choose Presidio to lead their modern platform and hybrid cloud journey because we put their business requirements first. We go deep in each major vendor's technology – 80+ products across 20+ vendors – but we're not tied to any one vendor. Our full services lifecycle, led by data center architects, engineers and managing consultants with more than eight years with Presidio on average, can handle strategy PLUS execution PLUS ongoing management of your modern platform.

VALIDATE. RECOVER. STRENGTHEN.

Presidio's Cyber Vault Validation Service validates vault isolation, backup integrity, malware cleanliness, and recovery readiness across critical workloads. Through a structured validation approach, CVVS delivers a Vault Readiness Score, risk-rated findings, and a prioritized remediation roadmap helping organizations prove recoverability before a cyber incident.
