

Modern Platforms

Azure Migration & Modernization

Organizations face increasing pressure to modernize legacy infrastructure while maintaining business continuity. However, many cloud initiatives stall as teams lack a clear understanding of application dependencies, struggle to align migration decisions to business priorities, and face growing security, compliance, and governance demands. As uncertainty increases around cost, risk, and operational impact, migrations slow or become reactive—limiting the ability to fully realize the value of Microsoft Azure.

THE SOLUTION

Presidio's Azure Migration & Modernization methodology provides a structured, low-risk approach to migrate and modernize workloads on Microsoft Azure. We combine deep discovery, application rationalization, secure Azure landing zone design, and wave-based migration execution to accelerate progress while minimizing disruption.

Our methodology spans the full migration lifecycle—from strategy and assessment through migration execution and post-migration optimization—supporting rehosting, replatforming, refactoring, and modernization initiatives on Azure.

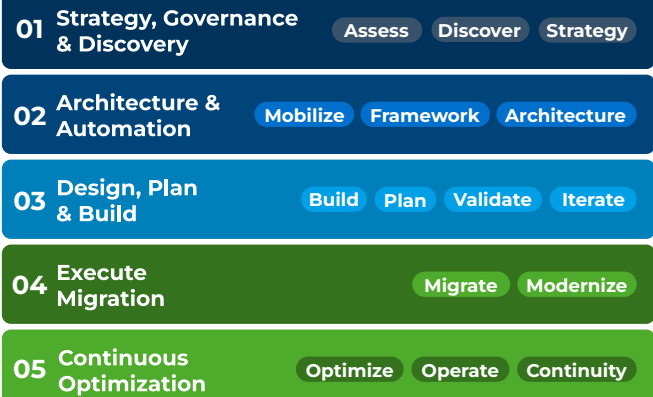

KEY BENEFITS

- ◆ Reduced migration risk through dependency-aware planning
- ◆ Faster time-to-value with repeatable, wave-based execution
- ◆ Improved cost transparency and optimization on Azure
- ◆ Secure, scalable Azure foundations aligned to best practices
- ◆ Flexibility to modernize incrementally over time

THE APPROACH

We leverage a proven, iterative migration lifecycle aligned to the **Microsoft Cloud Adoption Framework for Azure**, incorporating best practices across strategy, planning, governance, and execution. This approach integrates automated discovery, dependency analysis, workload rationalization, and structured migration wave planning to improve predictability and reduce risk.

Migrations are executed using repeatable patterns, automation, and Infrastructure as Code, allowing teams to scale across large application portfolios while preserving security, governance, and alignment with business priorities.

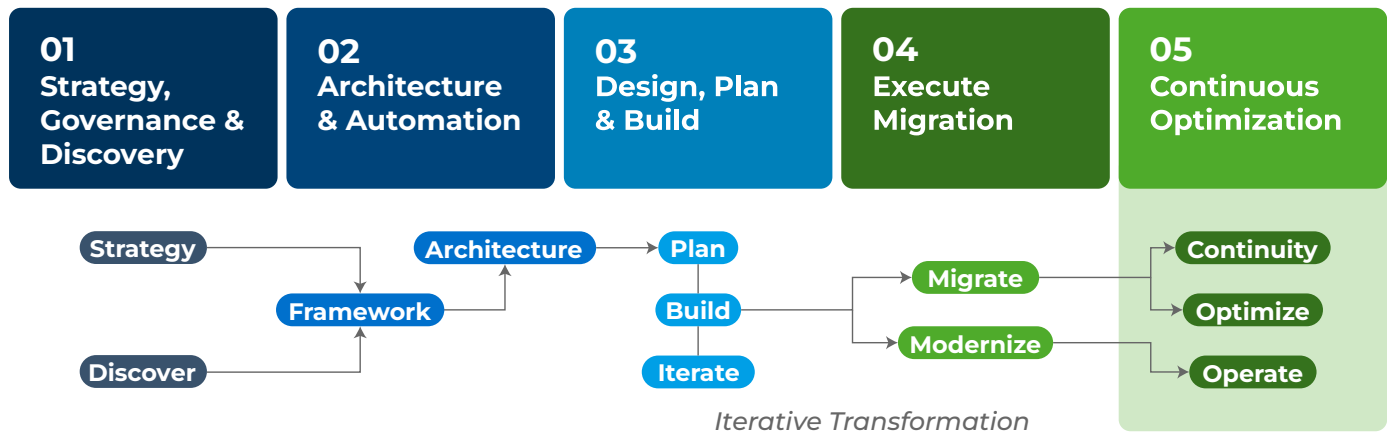

HOW TO GET STARTED

Start your Azure migration with a focused discovery and assessment to establish a clear strategy, credible business case, and prioritized roadmap. From there, migration waves are executed iteratively—allowing teams to build confidence, demonstrate early wins, and scale modernization efforts on Azure.

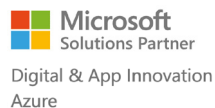

Azure Migration & Modernization

PRESIDIO CREDENTIALS

Presidio brings proven Azure expertise to every step of your cloud journey, holding the following credentials with Microsoft:

- ◆ Microsoft Cloud Solution Partner
- ◆ 300+ Microsoft Certifications
- ◆ Tier 1 Direct CSP Partner for M365, M365 GCC, Azure and AzureGov
- ◆ #1 AVS Migration Partner
- ◆ Three Members of Azure Partner Advisory Council

WHAT MAKES US DIFFERENT

We differentiate our Azure migration services by combining strategic guidance with hands-on engineering execution. Our teams prioritize discovery-first engagements, deep visibility into application relationships, and pragmatic wave planning over rigid, tool-driven migration tactics. By uniting automation, application rationalization, and Azure-aligned blueprints, Presidio enables faster, lower-risk migrations and delivers an Azure foundation that evolves with business needs over time.

WHY PRESIDIO

Presidio is here to guide your business transformation journey by helping you carefully navigate the fast-changing tech landscape. As the bridge between where you've been with foundational IT, and where you're going with modern AI and cloud services, we measure success with you on the terms you define. We strive to build lifetime relationships with each of our customers, and we do so by being fearless, fast, flexible, and compassionate. It's our mission to earn your trust and deliver innovative, high-quality outcomes at speeds once not thought possible, so you can achieve your business goals faster.

Start your Azure migration with a focused discovery and assessment to establish a clear strategy, credible business case, and prioritized roadmap. From there, migration waves are executed iteratively—allowing teams to build confidence, demonstrate early wins, and scale modernization efforts on Azure.
