

Application Modernization Workshop

It can be stressful to consider replacing legacy systems. For good reason. Updating core applications can be costly and can disrupt business operations. Legacy systems are often still providing value today - they just need to transform. Our 2-day Application Platform Modernization Workshop paves a stress-free path forward for modernizing your legacy technology.

Who Should Participate

Presidio's application modernization team facilitates the two-day hands-on workshop, so your participation is vital.

SME's and application business owners are crucial representatives and are expected to participate directly. These include:

- Application Owners and IT Stakeholders
- Solution Architects and Developers
- SME business stakeholders
- Security or compliance representatives (optional)

Workshop Topics

The following topics may be covered during the workshop sessions:

- Perform and review agentic code analysis (architecture, functions, dependencies, risks)
- Confirm assumptions, business drivers, and reduce risks with business and application owners
- Review recommended modernization patterns, target architecture, and timelines
- Provide a phased roadmap with estimates and recommended modernization approach
- Identify Actionable and Achievable Outcomes
 - Understand the legacy code functionality and business logic
 - Describe a modernization plan and approach
 - Estimate Cloud Costs and overall timeline
 - Create an Outcome-focused and goal-oriented roadmap

Key Workshop Outputs

Gain immediate value and insight through the following key outputs of the workshop:

- Business alignment of high-level goals and objectives with modern modernization patterns and approaches.
- Recommendations that identify key focus areas summarizing the findings and planning for what's next..
- Strategic roadmap outlining the steps, timelines, and effort required for each recommendation.
- A clear, actionable plan for modernizing your application portfolio.

Benefits of Workshop

The workshop provides your leadership team with the following benefits:

- Analysis of the existing code helps with business logic evaluation and identification
- A better understanding of modern technologies, approaches, patterns, and trends to gain competitive advantage.
- Identify ways to reduce operational costs, enhance productivity and enable faster adaptation to market changes.
- Insight into how to address common challenges associated with legacy systems, such as integration issues and maintenance costs.
- A preliminary roadmap for your organization's modernization efforts, aligning them with business goals and ensuring a phased, manageable approach.
