

Modern Networks

Network Modernization Maturity Workshop

*Build on what you have.
Plan for Agentic Ops.*

THE CHALLENGE

AI is changing what networks carry, how they are built and run, and how fast they must be fixed. Agents add machine-generated traffic that raises capacity and resiliency demands at every site. Operations are shifting from dashboards to AI that finds root cause and, increasingly, to agents that act. AI is surfacing flaws faster, so knowing what you have, how it is configured and how to change it quickly and safely matters more than ever. Meeting those demands depends on the whole network: its architecture, how it is designed and implemented, and how it is operated. Most of our clients already run strong platforms. The question is whether the network around them is ready for what comes next.

THE SOLUTION

Presidio's Network Modernization Maturity Workshop is a short, focused working session that shows where your network stands and what it will take to move forward. You choose up to two areas. For each, a five-stage model looks at the whole picture: the architecture, how it was designed and implemented, and how it is run day to day, not which products are installed. It is a conversation with the people who run your network, not an audit: we don't review configurations or score against best practices. We start from what you already have, credit what it does well, and weigh manufacturer, third-party and customer-built paths to agentic operations. You leave with a current and target stage for each area, and the steps to get there.

KEY BENEFITS

- ◆ **Know Where You Stand:** A stage for each area you choose, grounded in how your network is built and run.
- ◆ **Get More From What You Own:** Identify unused platform features, including built-in AI.
- ◆ **See Where Your Platform Ends:** Pinpoint gaps in coverage, design, change safety, and visibility.
- ◆ **Modernize On Your Refresh Cycle:** Tie next steps to lifecycle and renewal events.

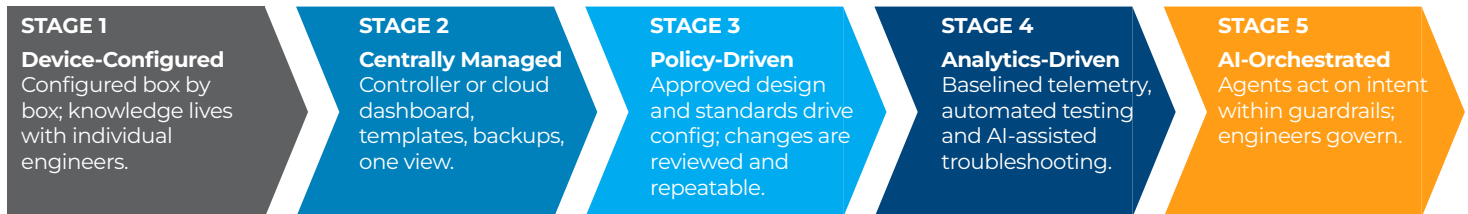

THE WORKSHOP AT A GLANCE

- ◆ **Format:** A short, focused working session on the areas you choose.
- ◆ **Scope:** Up to two: Enterprise Switching, Data Center Networking, WAN, Mobility, Network Security, NetDevOps, Lifecycle (the last two look across the whole network).
- ◆ **What We Ask:** Area owners discuss how the network is set up and run.
- ◆ **Optional:** A high-level diagram or platform overview. This is not an assessment or configuration review.
- ◆ **You Receive:** A written readout of current and target stages, key gaps, and next steps.

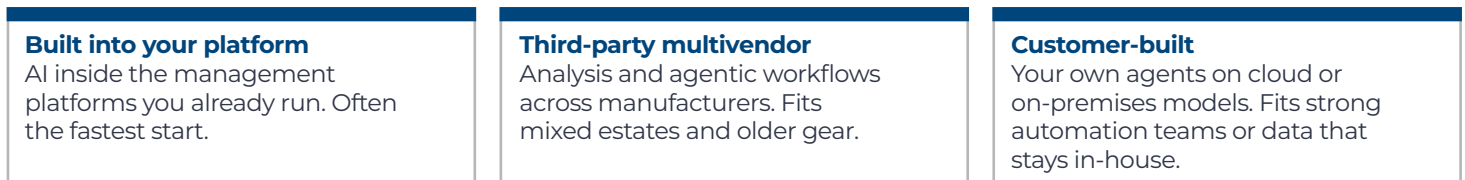

Network Modernization Maturity Workshop

FIVE STAGES, EACH BUILT ON THE ONE BEFORE

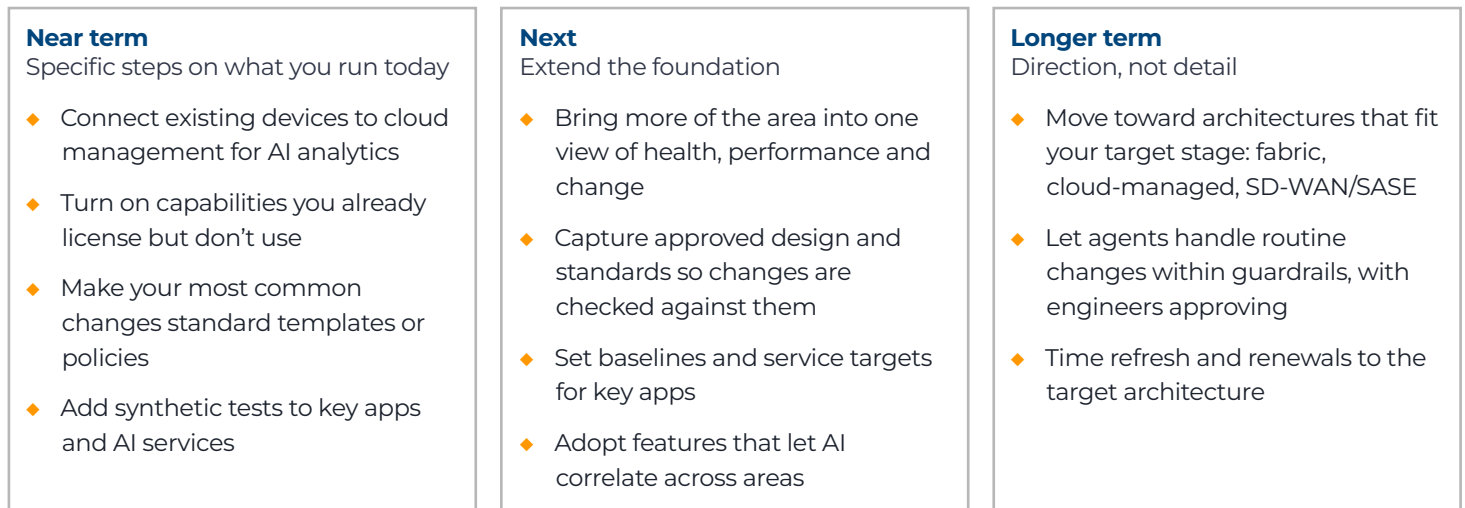

Each area is placed on its own, with full credit for what your current platforms already do. The goal is the next stage.

THREE PATHS TO AGENTIC OPS, ONE FOUNDATION

WHAT A PLAN TYPICALLY INCLUDES

WHY PRESIDIO

With over 20 years of experience designing and modernizing enterprise networking and automation solutions across leading technologies, we are trusted network authorities. Presidio is the bridge between where you've been (foundational IT) and where you're going (ultra-modern AI and cloud services), and we measure success in your terms. We strive to build lifetime relationships with those that give us their business, and we do so by being fearless, fast, flexible, and compassionate. It's our mission to earn your trust and deliver innovative, high-quality results at the speed your business needs to succeed.

START WITH THE AREAS THAT MATTER TO YOU

Tell your account team which one or two areas matter most. We'll tailor the session and return a clear stage, the gaps that matter and a plan you can act on.

Know your stage. Plan your path.
