

Azure Advanced Migration Assessment

Plan your move to the cloud using infrastructure and application insights mapped to real-time performance data and cost estimates. The Azure Advanced Migration Assessment helps build a data-driven migration strategy incorporating workload rationalization, wave planning, Total Cost of Ownership (TCO) analysis, and a strategic roadmap.

Key Workshop Outputs

Gain actionable insights and a clearer migration path through the following key outputs:

- Executive summary of data-driven findings
- Identification of workloads to move to Azure
- Total Cost of Ownership (TCO) analysis
- Application rationalization and migration wave planning
- Strategic roadmap, recommendations, and next steps

Who Should Participate

The Azure Advanced Migration Assessment combines infrastructure analysis with application rationalization, costs, dependencies, and business strategy to inform migration planning. Based on those assessment areas, recommended participants include stakeholders who understand the organization's infrastructure, application portfolio, cloud strategy, and business priorities.

Recommended Attendees:

- IT and Infrastructure Leaders
- Cloud and Azure Teams
- Application Owners and Architects
- Business and Technology Stakeholders

Workshop Topics

The following areas may be covered during the assessment:

- **Infrastructure Analysis:** Conduct a live, real-time assessment of your digital estate using current performance information and analytical insights.
- **Application Estate Analysis:** Evaluate applications to support rationalization and migration wave planning based on costs, dependencies, and overall business strategy.
- **TCO:** Assess the TCO associated with migrating and modernizing workloads using Azure.
- **Workload Prioritization:** Identify workloads to move to Azure using data-driven findings.
- **Migration Strategy and Planning:** Translate assessment findings into recommendations, next steps, and a strategic migration roadmap.

Benefits of Workshop

The Azure Advanced Migration Assessment can help your organization:

- Gain a better understanding of opportunities to maximize TCO.
- Develop a comprehensive action plan tailored to your cloud migration journey.
- Understand infrastructure and application considerations through real-time assessment data.
- Prioritize applications and migration waves based on costs, dependencies, and business strategy.
- Model scenarios to help save money and increase efficiency.
